Technologies used

→Html

- We used HTML to structure our webpage and its content. We used some HTML tags document type, html tag, title tag, body tag, heading tag, paragraph tag, list tag, image tag, anchor link tag, div tag, footer tag.
- We also used nested elements and class selectors

→CSS

For applying styles to webpage, in CSS we used style appliers: -

- Margin, padding, box-sizing, list-style, text-decoration, display, justify-content, align-items, width, height, font-size, letter-spacing, colour, font-weight, transition, flex-wrap, background-image, background-position, background-size, font-style, background-colour, outline, flex-direction, overlay etc.
- For change of colour of button we use hover effect

About Project

1. Restaurant website (Saladisht)

To successfully design content for a restaurant website, there are 2 scenarios we have to consider two scenarios to craft and organizing the content. To know about the restaurant; those who know about the brand and who don't know about the brand can easily visit the website. This restaurant provides foods of the highest quality, embracing the locally sourced and genuinely fresh regional ingredients, and we also start fusion dishes soon. The enjoyment of the customers is the best result for us. We have experienced chefs, who are experts in all the dishes with a full high genie. We are welcoming with warm hearts to enjoy the taste of our restaurant with joy and happiness

2. Objective of Project

It has been the first experience doing such a tiny project full of creative interest. We wanted to make our project an attractive website with creativity, we used different programming processes like HTML for creating a basic website, and to get a radiant look we used CSS part and for design stylishly the web. These programming processes are easy to approach and understand the coding.
